

Problem 2.2:

1 a) The full address is `www.tutorialspoint.com/hello.htm`, as the source `/hello.htm` is requested from the host `www.tutorialspoint.com` via an http request

1 b) HTTP/1.1, this information can be found in the first line of the request.

1 c) It is a GET request, which requests a representation of `www.tutorialspoint.com/hello.htm`.

2) I get the content of the html file of the website I requested

3)
GET /teaching/TopModCS/notes.pdf HTTP/1.1
host: old.kwarc.info
Accept: application/pdf

As a result I get a lot of characters that are not readable for humans, e.g. like this:

```
xÜV?n?8??+?l~?%?@`?hffv)?İ?B?i[Y2D??L??K?h??tÏsĈ?<?$a3?FL?L2?U?#M?I#
